

The Membrane Study Group (GEM) and Club Exocytose-Endocytose are two French societies that regroup researchers in the fields of membrane biophysics and membrane trafficking, respectively. With the participation of the Italian societies of Pure and Applied Biophysics (SIBPA), of Chemistry (SCI) and of Biochemistry and Molecular Biology (SIB), for the first time a joint meeting will be held entitled "**Membrane Biophysics of Exo-Endocytosis: from Model Systems to Cells**".

The goal of this international meeting is to illustrate how novel opportunities for discovery in the life sciences arise when the most urgent challenges in the field of exo and endocytic membrane trafficking are addressed from fresh angles based on innovative biophysical tools and concepts.

This meeting will take place from **April 3-6, 2019**, in the region of Nice on the sunny French Riviera in the South of France. It will be limited to a maximum of 150 people in a format that encourages interactive discussions of latest research in these areas. 75% (40 in total) of the oral communications will be chosen from submitted abstracts.

With this mail, we would like to invite you to take down the event in your agendas. Please check below for the dates concerning abstract submission.

Web site: <http://biophee-19.fr/>

Opening of registrations: 1st October 2018

Deadline for abstracts: 15 January 2019
